

Git Practical Test – Scenario Based Questions

Scenario 1: Repository Initialization

You joined a new project. Your manager asked you to set up the Git repository.

Tasks:

Create a folder called project-app

Initialize a Git repository

Create a README.md file with project description

Commit the file with a proper commit message

Scenario 2: Feature Development Workflow

You are assigned to develop a login feature without disturbing the main code.

Tasks:

Create a branch called feature-login

Switch to the branch

Create a file called login.html

Add sample login page content

Commit the changes

Scenario 3: Multi-Developer Environment

Another developer is working on payment feature simultaneously.

Tasks:

Switch to main branch

Create a branch called feature-payment

Create file payment.html

Add sample content

Commit changes

Scenario 4: Merge Conflict Situation

Both developers modified the same README file.

Tasks:

Modify README.md in feature-login branch

Modify README.md differently in feature-payment branch

Merge feature-login into main

Merge feature-payment into main

Resolve the conflict
Commit the resolved version

Scenario 5: Undo Developer Mistake

A developer accidentally committed a file containing sensitive data.

Tasks:
Create file secret.txt
Commit the file
Remove the file from Git tracking
Commit the removal properly

Scenario 6: Emergency Production Fix

Production issue found. Need urgent fix.

Tasks:
Create branch hotfix
Add file fix.txt
Add bug fix content
Commit changes
Merge fix into main

Scenario 7: Work Interruption Situation

You are working on UI changes but manager asks you to switch tasks urgently.

Tasks:
Modify ui.html without committing
Temporarily save your work
Switch to another branch
Return and restore your changes

Scenario 8: Remote Collaboration

Your team uses GitHub for collaboration.

Tasks:
Connect your local repo to remote GitHub repo
Verify remote connection
Push main branch
Push feature branches

Scenario 9: Accidental Branch Deletion

You accidentally deleted a branch containing important work.

Tasks:

Delete a branch

Recover the branch using Git history

Scenario 10: Final Integration Check

Project integration must be verified before release.

Tasks:

Display all branches

Show commit history in one line format

Show project status

Verify working directory clean
